

600-Yard Range Berm Maintenance

The 600-yard impact and safety berms received some intensive maintenance efforts the last weekend of March 2020. Thanks to the very skilled efforts of two club members, heavy equipment worked on top of the impact berm to remove the number boards and old hay bales. They then brought up fill material and packed it into the face of the berm and placed new hay bales across the top. Other club members acted as safety guides for the equipment; painted, repaired, and reset the number boards back into position; and used shovels and chainsaws where needed. The safety berm also received additional fill material. Finally, some road repairs and clearing of parking areas were also made along the range as well as in the pit area.

The general sequence of the efforts described above can be seen in the photos (a separate attachment). A big thank you to all involved!
